

PEYC Wind Direction Distribution

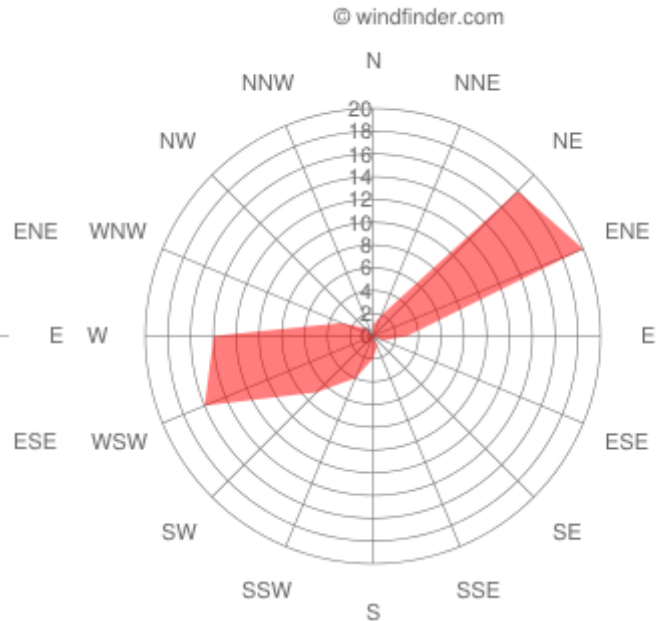

The charts below show Windfinder web site data of monthly wind percentage distribution recorded at Edinburgh Airport and averaged over 2000-2012 against a 16 point compass rose (i.e. W, WSW, SW, SSW, etc.). From April to June there is a roughly equal split between NE-ENE and W-WSW winds. From July onwards WSW winds become increasingly frequent. Winds outside the NE-ENE and SSW-W sectors are comparatively rare. PEYC race courses should include windward beats aligned as far as possible with the dominant wind directions.

Jim Scott - PEYC Sailing Secretary
